Education

Illinois Institute of Technology August 2018 - May 2024
Bachelor of Science, Artificial Intelligence,
Minor In Applied Mathematics
Masters of Science, Business Analytics May 2024 – December 2025
- International Student merit-based Scholarship

Course Projects:

Deloitte Australia – Data Analytics Job Simulation (Virtual Internship)
Completed July 2025

- Completed a structured Deloitte consulting simulation focused on forensic analytics and fraud detection.
- Built an interactive Tableau dashboard to visualize transactional trends, anomalies, and risk indicators.
- Applied Excel-based data classification and hypothesis testing to analyze transaction patterns and uncover insights.
- Synthesized findings into client-facing conclusions and presentations, simulating real-world consulting deliverables.

COVID-19 Vaccination Sentiment Analysis

- Led an NLP-based analytics project analyzing 1M+ tweets to assess public sentiment toward COVID-19 vaccinations.
- Applied BERT-based sentiment classification and translated outputs into interpretable trend metrics and visual dashboards.
- Delivered real-time sentiment insights presented to public health teams to support communication and outreach strategies.

Rideshare Application Development

- Developed a rideshare platform with focus on data modeling, operational workflows, and location-based analytics.
- Designed relational database structures and executed SQL queries to support trip tracking and user activity analysis.
- Delivered a functional prototype within 8 weeks, demonstrating structured execution, collaboration, and scalable data design.

Retail Operations Optimization – Foxcore Retail

- Designed and implemented a normalized relational database (10+ tables, 3NF) to support retail sales, events, and commission reporting.
- Wrote SQL queries to manage inventory, calculate commissions, and analyze customer purchase patterns.
- Enabled efficient and scalable reporting by enforcing data integrity and standardized schemas.

Search Engine Development

- Designed an NLP-based information retrieval system using Python to support indexing, relevance scoring, and search optimization.
- Implemented TF-IDF and cosine similarity techniques to rank results and improve relevance.
- Improved system efficiency by reducing search response time by 25% and supporting query expansion and spelling correction.

Decision Modeling for Business Optimization

- Built Excel-based decision models including break-even, profit-maximization, and sensitivity analysis.
- Used Solver, pivot tables, scenario tools, and multi-variable data tables to evaluate pricing and marketing trade-offs.
- Translated quantitative outputs into data-driven business recommendations supported by dynamic dashboards.

Achievements:

- Built a web app with a team in the first crypto-based Chicago Hackathon to help immigrants through donations and took first place.
  February 2024

Personal Project:

- Joined SAE as part of the software development team to help build key components of the dashboard for the electric car which was influential for the Formula SAE competition. August 2020
- Played a key role in the Illinois Tech Robotics team's first-place win at the VEX Robotics competition by focusing on building the robot's structure. My contributions helped ensure the robot was durable and functional, emphasizing the importance of teamwork and strategic execution in competitive
  robotics. October 2023

Skills: Python, Java, C++, Django,

Experience

Global Shala, Chicago, United States of America June 2022
IT department
Data Analyst

- Performed data analysis on real time data to provide expert guidance.
- As part of the research team, developed visual graphs using essential critical thinking skills to signify the evidence.
- Implemented **tableau, excel** in aiding the visualization
